Regional authorities regulate antibiotic use

Tuesday, 1 June 2004 By Victoria Alday de Graindorge, Ph.D.

Overview of European, U.S. legislative systems

The regulation of antibiotic use has the objectives of guaranteeing the safety and efficacy of the drugs for the animals treated and protecting the health of consumers. As with other drugs, antibiotic use assumes the existence of some potential undesirable effects.

These can include the promotion of resistance to antimicrobial agents, interference with the normal microflora of the treated animals, residues in animal tissues destined for human consumption, potential toxic effects on the cells and tissues of animals, adverse effects due to interactions with other drugs or diseases, and allergic phenomena. Because of such effects, antibiotics are regulated by sanitary authorities.

In some countries, various aquaculture drugs and treatments are available from "shrimp pharmacies."

European union legislation on antibiotics

In the European Union, the entity responsible for the evaluation of medical drugs is the Committee for Medicinal Veterinary Products (CVMP) of the European Agency for the Evaluation of Medicinal Products. Current legislation is based on Regulation no. 2377/90 of the council, dated June 26, 1990, and its later modifications.

Table 1 (right) lists the antibiotics that are authorized by the E.U. for use in aquaculture. Some are specifically authorized for fish species, while most are approved for use in all species destined for human consumption. Also included are prohibited antibiotics whose use is not authorized in any species destined for human consumption.

tibiotic mides ethoprim kicillin cillin ylpenicillin xacillin	Species Sulfar	MRL	Target Tissues				
kicillin cillin ylpenicillin acillin xacillin			minopyrimidines				
kicillin cillin ylpenicillin acillin xacillin	All	100 ug/kg	Muscle				
cillin ylpenicillin acillin xacillin	All	50 ug/kg	Muscle and skin in natural proportions				
cillin ylpenicillin acillin xacillin	Penicillins						
ylpenicillin acillin xacillin	All All	50 ug/kg 50 ug/kg	Muscle, liver, kidney, and fat Muscle, liver, kidney, and fat				
acillin xacillin	All	50 ug/kg 50 ug/kg	Muscle, liver, kidney, and fat				
	All	300 ug/kg	Muscle, liver, kidney, and fat				
	All	300 ug/kg	Muscle, liver, kidney, and fat				
illin	All	300 ug/kg	Muscle, liver, kidney, and fat				
	Tetracyclines						
tetracycline	All	100 ug/kg 300 ug/kg	Muscle and skin in natural proportions Liver				
		600 ug/kg	Kidney				
etracycline	All	100 ug/kg	Muscle and skin in natural proportions				
		300 ug/kg	Liver				
ovelinee	All	600 ug/kg	Kidney				
cyclines	All	100 ug/kg 300 ug/kg	Muscle and skin in natural proportions Liver				
		600 ug/kg	Kidney				
Aminoglucosides							
nicine	All	500 ug/kg	Muscle and skin in natural proportions,				
			liver, and fat				
momicine	All	5,000 ug/kg	Kidney				
nomicine	All	500 ug/kg 1,500 ug/kg	Muscle and skin in natural proportions Liver and kidnev				
ctinomycin	All	300 ug/kg	Muscle and skin in natural proportions				
,		500 ug/kg	Fat				
amphenicol	Prohibited	1,000 ug/kg	Muscle and skin in natural proportions				
	Macrolides, Lincosamides, Streptogramins, and Pleuromutilines						
romycin	All	200 ug/kg	Muscle and skin in natural proportions,				
nanin	A II	EQ ug/kg					
JOSIN	All						
in	All	100 ug/kg	Muscle, skin in natural proportions, liver,				
			kidney, and fat				
mycin	All						
		1,500 ug/kg	Kidney				
Quinolones and Fluoroquinolones							
ofloxacin	All	100 ug/kg	Muscle and skin in natural proportions				
		50 ug/kg	Fat				
	All	200 ug/kg 300 ug/kg	Liver and kidney Muscle and skin in natural proportions				
acin	,	100 ug/kg	Fat				
kacin		800 ug/kg	Liver				
kacin		COO					
	A II	600 ug/kg	Kidney				
kacin floxacin	All	100 ug/kg	Muscle and skin in natural proportions, fat				
	All Fishes						
floxacin equine nic acid	Fishes Fishes	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions				
floxacin equine nic acid	Fishes	100 ug/kg 200 ug/kg 600 ug/kg	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions				
floxacin equine nic acid floxacin	Fishes Fishes Salmonids	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions Muscle and skin in natural proportions				
floxacin equine nic acid	Fishes Fishes Salmonids Prohibited	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg 30 ug/kg	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions Muscle and skin in natural proportions				
floxacin equine nic acid floxacin	Fishes Fishes Salmonids	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg 30 ug/kg Nitrofur	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions Muscle and skin in natural proportions ans				
loxacin equine nic acid loxacin zolidone	Fishes Fishes Salmonids Prohibited Prohibited	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg 30 ug/kg	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions Muscle and skin in natural proportions ans				
Iloxacin equine nic acid Iloxacin zolidone	Fishes Fishes Salmonids Prohibited	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg 30 ug/kg Nitrofur	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions Muscle and skin in natural proportions ans				
Iloxacin equine nic acid Iloxacin zolidone	Fishes Fishes Salmonids Prohibited Prohibited	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg 30 ug/kg Nitrofur	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions Muscle and skin in natural proportions ans azoles				
Iloxacin equine nic acid Iloxacin zolidone	Fishes Fishes Salmonids Prohibited Prohibited	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg 30 ug/kg Nitrofur	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions Muscle and skin in natural proportions ans azoles				
loxacin equine nic acid loxacin zolidone tridazole	Fishes Fishes Salmonids Prohibited Prohibited Prohibited	100 ug/kg 200 ug/kg 600 ug/kg 1,300 ug/kg 30 ug/kg Nitrofur Nitroimida	Muscle and skin in natural proportions, fat Liver and kidney Muscle and skin in natural proportions Muscle and skin in natural proportions Muscle and skin in natural proportions ans azoles				
romycin cosin	Fishes Prohibited Macrolides, All All All All	1,000 ug/kg Lincosamide: 200 ug/kg 50 ug/kg 1,000 ug/kg 100 ug/kg 50 ug/kg 50 ug/kg 1,500 ug/kg	Muscle and skin in natural proportio liver, kidney, and fat Muscle and skin in natural proportio Liver and kidney Muscle, skin in natural proportions, I kidney, and fat Muscle and skin in natural proportio Fat Liver Kidney				

Table 1. Antibiotics authorized and prohibited by the European Union.

MRL = Maximum residue limit, All = All species consumed

The CVMP document "Note for Guidance on the Risk Analysis Approach for Residues of Veterinary Medicinal Products in Food of Animal Origin" states that it could be possible to extrapolate the maximum residue limits for salmonids to all fish species.

U.S. use of antibiotics

The United States establishes norms, ensures they are followed and punishes infractions through the Food and Drug Administration (FDA). Through the Center for Veterinary Medicine, FDA is in charge of regulating the studies that pharmaceutical companies must present to obtain approval for drugs to be used in food animals.

This system contemplates the establishment of maximum levels for residues that are innocuous to consum-ers and the necessary requisites to establish the withdrawal period or waiting time between the administration of a drug to animals and its clearance from their systems.

The Food Safety and Inspection Service, under the U.S. Department of Agriculture, has the mission of national control of residue incidence through random sampling of tissues in slaughterhouses and their chemical analysis.

Table 2 lists the antibiotics prohibited by FDA for use in animals destined for human consumption. Table 3 lists the tolerated residue levels established by FDA for aquatic organisms.

Table 2. Antimicrobials prohibited by the U.S. Food and Drug Administration for use in animals	Table 3. Residues tolerated by the U.S. Food and Drug Administration for aquatic organisms.				
destined for human consumption. Antibiotic	Antibiotic	Species	Withdrawal Period (days)	Maximum Residue Limit in Flesh (ppm)	
Chloramphenicol Dimetridazole Ipronidazole Other nitroimidazoles Furazolidone Nitrofurazone Fluoroquinolones Glucopeptides	Sulfamerazine	Trout	21	0	
	Sulfadimethoxine + Ormetroprim	Salmonids Catfish	42 3	0.1 0.1	
	Oxytetracycline	Pacific salmon Salmonids Catfish Lobster	7 21 21 30	2 2 2 2	

FDA's title 21, chapter I, parts 500-600 code establishes the conditions under which specific antibiotics can be used in species for which they are not registered, with special emphasis on limitations for their applications in animals destined for human consumption.
